Commercial Center℠: Security

Safely Connect to Your Business Customers

Commercial Center: Security from Fiserv is a comprehensive security platform designed to provide added protection to Commercial Center, the business banking and treasury management application from Fiserv.

Give your commercial customers peace of mind by protecting their digital channels with an integrated security solution based on patented technology. In addition to increasing the security of Commercial Center, the Security module is a gateway to provide protection for your treasury services, such as lockbox, business bill pay and remote deposit. By providing private browsing capabilities, enforcement of entitlements, access control and strong authentication features, Commercial Center: Security simplifies protecting all treasury services accessed through Commercial Center.

Commercial Center: Security provides:

→ Secure browser

→ Patented technology

→ Integrated multifactor authentication

→ Single sign-on

→ Distributed denial-of-service protection

→ Web application intrusion protection

Open and Flexible Design

Commercial Center is an open, fully integrated and scalable banking solution that makes managing treasury services easier, with the user experience and sophistication your business customers desire. Its real-time cash-management capabilities are designed for digital channels, have easy-to-use interfaces, and enable notification and authentication through smartphones, tablets and wearable devices. The single platform facilitates a unified user experience across multiple devices, while integrated security and analytics offer enhanced fraud prevention.

Key Security Module Features and Benefits

→ **Private browsing** – Reduces risk by avoiding sites with malware

→ **Authentication (user and device)** – Eliminates hardware token and third-party security product; supports SMS or text and push one-time passcodes

→ **Malware protection** – Man-in-the-middle, man-in-the-browser attack mitigation

→ **Encryption** – Keyboard, data and transaction encryption to ensure data integrity

→ **Entitlements** – Limits user access to sites, functions, transaction entry and approval

→ **Server-side site validation** – Prevents misdirection of users to false sites

→ **Private cloud technology** – Supports web and mobile devices
